Policy Title..... Progesterone (Vaginal)  
for Individual and Family Plans

# Progesterone (Vaginal) for Individual and Family Plans

- Endometrin® (progesterone vaginal insert – Ferring)

---

### **INSTRUCTIONS FOR USE**

*The following Coverage Policy applies to health benefit plans administered by Cigna Companies. Certain Cigna Companies and/or lines of business only provide utilization review services to clients and do not make coverage determinations. References to standard benefit plan language and coverage determinations do not apply to those clients. Coverage Policies are intended to provide guidance in interpreting certain standard benefit plans administered by Cigna Companies. Please note, the terms of a customer’s particular benefit plan document [Group Service Agreement, Evidence of Coverage, Certificate of Coverage, Summary Plan Description (SPD) or similar plan document] may differ significantly from the standard benefit plans upon which these Coverage Policies are based. For example, a customer’s benefit plan document may contain a specific exclusion related to a topic addressed in a Coverage Policy. In the event of a conflict, a customer’s benefit plan document always supersedes the information in the Coverage Policies. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan document. Coverage determinations in each specific instance require consideration of 1) the terms of the applicable benefit plan document in effect on the date of service; 2) any applicable laws/regulations; 3) any relevant collateral source materials including Coverage Policies and; 4) the specific facts of the particular situation. Each coverage request should be reviewed on its own merits. Medical directors are expected to exercise clinical judgment where appropriate and have discretion in making individual coverage determinations. Where coverage for care or services does not depend on specific circumstances, reimbursement will only be provided if a requested service(s) is submitted in accordance with the relevant criteria outlined in the applicable Coverage Policy, including covered diagnosis and/or procedure code(s). Reimbursement is not allowed for services when billed for conditions or diagnoses that are not covered under this Coverage Policy (see "Coding Information" below). When billing, providers must use the most appropriate codes as of the effective date of the submission. Claims submitted for services that are not accompanied by covered code(s) under the applicable Coverage Policy will be denied as not covered. Coverage Policies relate exclusively to the administration of health benefit plans. Coverage Policies are not recommendations for treatment and should never be used as treatment guidelines. In certain markets, delegated vendor guidelines may be used to support medical necessity and other coverage determinations.*

### **OVERVIEW**

Page 1 of 3

Coverage Policy Number: IP0091

Endometrin (vaginal insert[tablet]) is indicated to support embryo implantation and early pregnancy by supplementation of corpus luteal function as part of an ART treatment program for infertile women.<sup>1</sup> Progesterone is also available as compounding kits (First-Progesterone VGS [100, and 200 mg]); these are *not* FDA-approved products.<sup>2</sup>

Progesterone is available in other dosage forms, including parenteral (e.g., progesterone in oil), oral capsules (Prometrium®), and powder; some of these formulations can be used to compound progesterone products.<sup>3</sup> The parenteral form is approved for the treatment of amenorrhea and for abnormal uterine bleeding. The oral formulation of progesterone is indicated for the prevention of endometrial hyperplasia in non-hysterectomized postmenopausal women who are receiving conjugated estrogen tablets and for use in secondary amenorrhea. When administered vaginally, progesterone achieves high levels in the uterus.<sup>4</sup> In addition to infertility, there are many other uses for vaginally administered progesterone, including threatened abortion, prevention of recurrent miscarriage, and threatened preterm labor. According to the American College of Obstetricians and Gynecologists (ACOG), vaginal progesterone is recommended to reduce the risk of spontaneous preterm birth in patients with a singleton pregnancy and a short cervix (< 25 mm) diagnosed between 16 and 24 weeks by transvaginal ultrasound.<sup>5</sup> Vaginal progesterone can be continued up to 34 to 36 weeks of gestation.<sup>6</sup> Compounded progesterone products are used for oral, topical, sublingual, and vaginal administration as well as for injection.<sup>7</sup>

## Coverage Policy

**Fertility medications are specifically excluded under most benefit plans. Please refer to the applicable benefit plan document to determine benefit availability and the terms and conditions of coverage.**

### **POLICY STATEMENT**

Prior Authorization is required for benefit coverage of vaginal progesterone. All approvals are provided for the duration noted below.

**Progesterone (Endometrin) is considered medically necessary when ONE of the following is met (1 or 2):**

### **FDA-Approved Indication**

- 1. Infertility.** Approve for 9 months if the patient meets BOTH of the following (A and B):
  - A)** The medication is to be used to support embryo implantation and early pregnancy by supplementation of corpus luteal function; AND
  - B)** Use is indicated as part of an Assisted Reproductive Technology (ART) treatment program.

### **Other Use with Supportive Evidence**

- 2. Prevention of Preterm Birth.** Approve for 1 year.

### **Conditions Not Covered**

**Progesterone (Endometrin) for any other use is considered not medically necessary. Criteria will be updated as new published data are available.**
